

3.1.5. BUY, SELL AND REDEEM VeASSETS

Through the VeADIR you can obtain asset tokens that are fully backed by their physical asset. In fact, each token is your “certificate of ownership” to that proportionate value of the asset. They are, thus, fully redeemable upon demand. There are several reasons to own VeAssets including, ease of ownership, liquidity, security/safe storage, and in many cases, the stability of the asset compared to other holdings. VeAssets are priced competitively compared to traditional and other digital sources while often providing additional benefits yielding superior value.

From the menu, select VeAssets. The page will show all the assets currently available. At the time of this writing, you can purchase a variety of precious metals. From the left the table shows the Asset:

- Ve Gold Z1 – One ounce of .9999 gold
- Ve Palladium Mpl Lf Z1 – One ounce Palladium Maple Leaf Coin
- Ve Gold G1 – One gram of .9999 gold
- Ve Silver K1 – One kilogram .999 silver
- Ve Silver Z1 – One ounce .999 silver

Going across from the left, the **Symbol** is used with the token contract and when trading, the **Type** of asset in its physical form, the amount currently in Inventory, the **Supply** that is circulating in the market and inventory, the **Price** you can purchase each token for from the VeADIR, and the **Market Cap** of the current Supply.

In the upper right of the page, you can click on **Purchases** to see all the tokens you’ve bought with your wallet, click on **Redemptions** to see each token you’ve redeemed and **Sales** to see what you’ve sold back to Veritaseum.

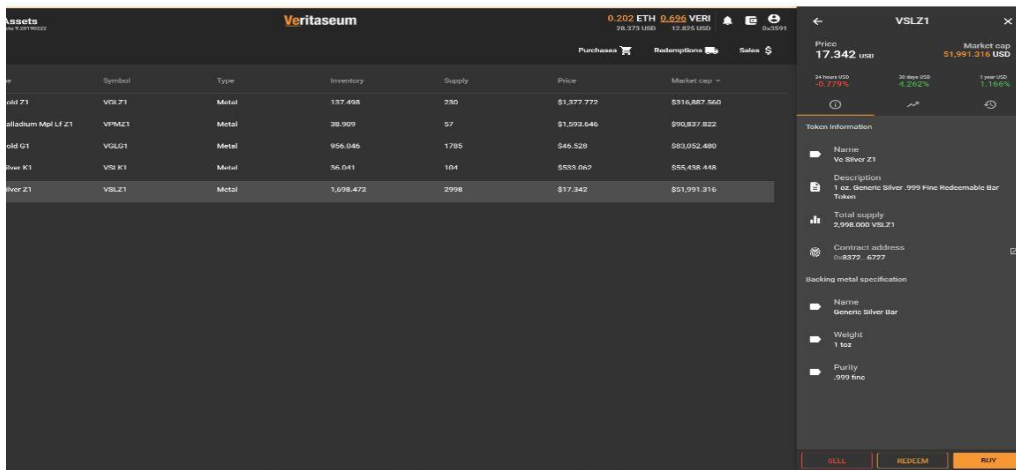

Name	Symbol	Type	Inventory	Supply	Price	Market cap
Ve Gold Z1	VGLZ1	Metal	137,498	230	\$1,377,772	\$316,887,560
Ve Palladium Mpl Lf Z1	VPMZ1	Metal	38,909	57	\$1,593,646	\$90,837,822
Ve Gold G1	VGLG1	Metal	956,046	1785	\$46,528	\$83,052,480
Ve Silver K1	VSLK1	Metal	36,041	104	\$533,062	\$55,438,448
Ve Silver Z1	VSLZ1	Metal	1,698,472	2998	\$17,342	\$51,991,316

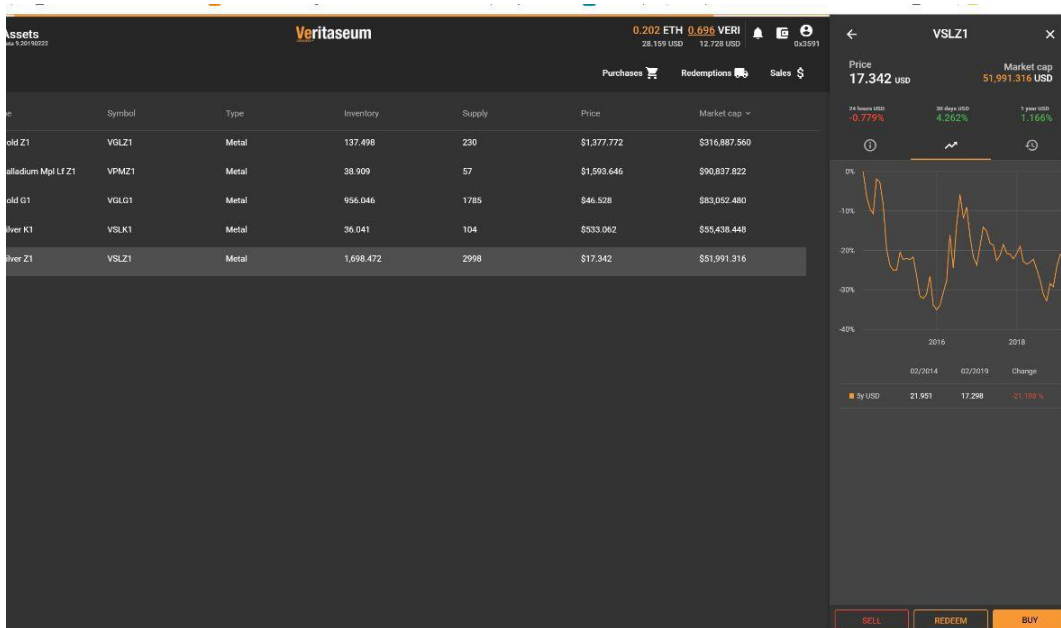

1. Buying VeAssets

Simply select the asset you wish to purchase. Once you select the asset, the **Buy, Sell, Redeem** transaction box will open. At the top of the box you will see the symbol for the token you selected and underneath growth statistics over periods of time: 24 hours, 30 days and one year.

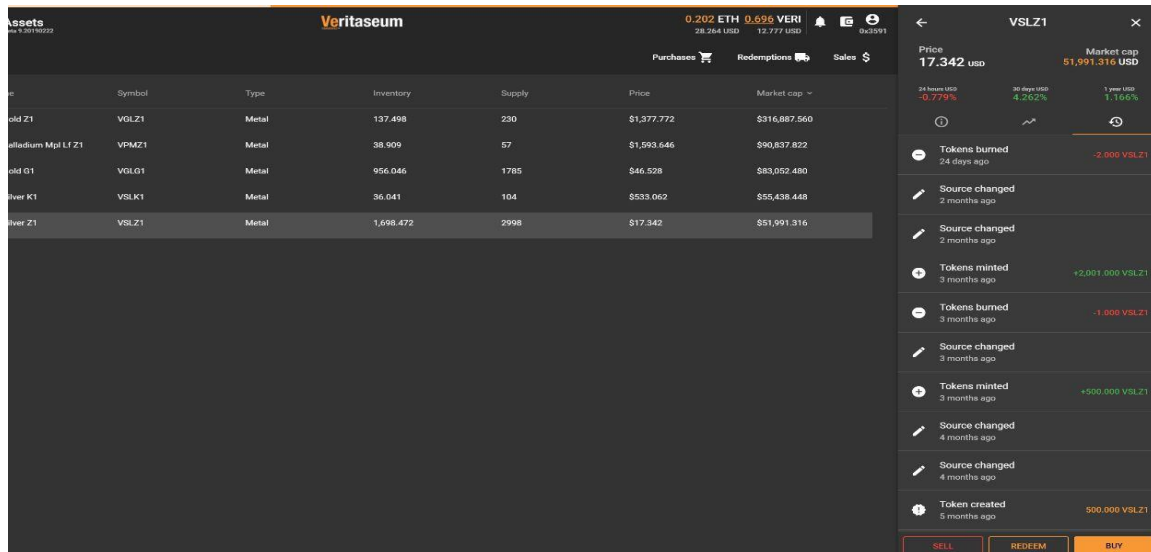

By clicking on the , you can review information on the token including its description, its purity and the contract address, which is where your tokens will come from.

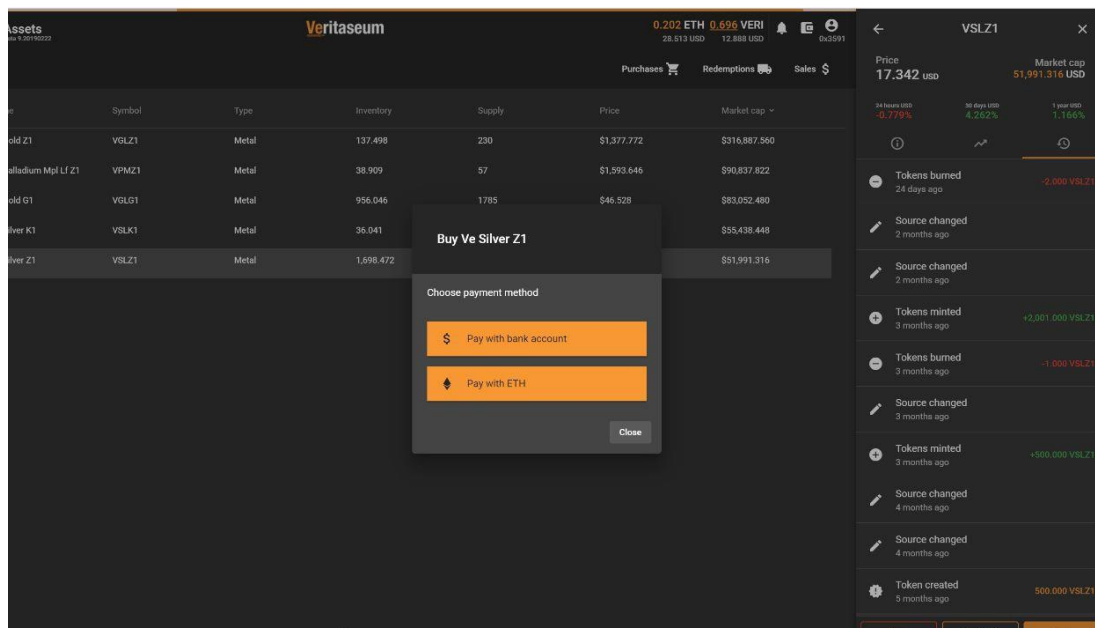

Click on  to see the performance of the asset over the last five years.

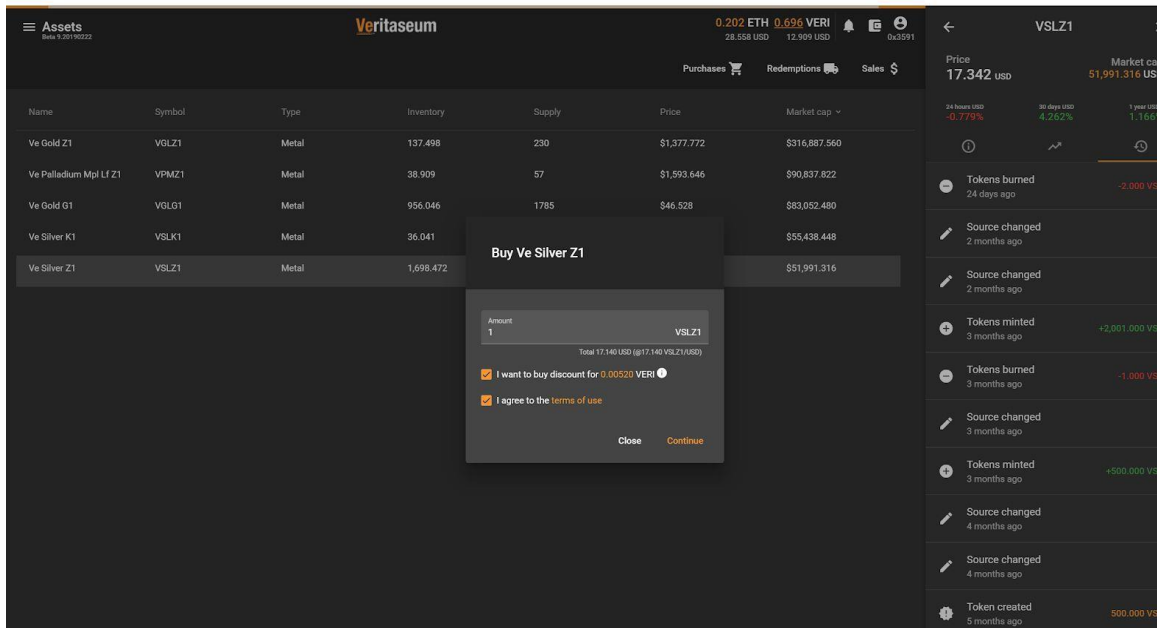

By clicking on , you will see the activity in the token over time. It shows the number of **Tokens Minted**, which are those added to inventory and **Tokens Burned**, which are tokens that have been sold back to Veritaseum or Redeemed. You can click on the white icons next to each of these items to view the transaction on the Blockchain.

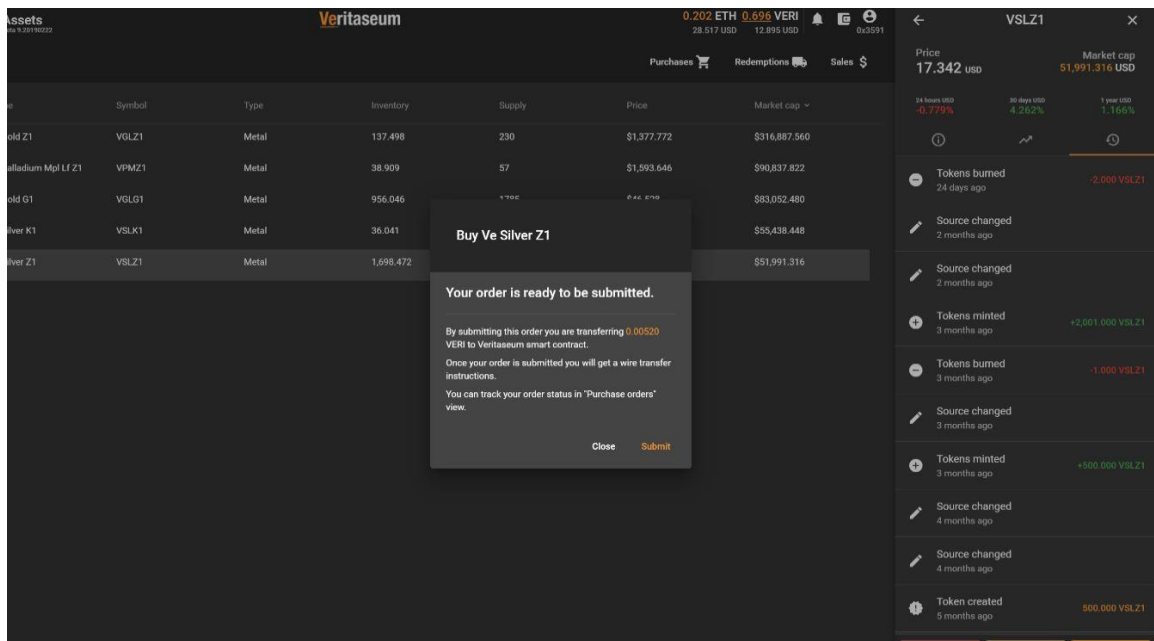

To begin the purchase process, click on the **Buy** button. This will show your payment options, either wire/ACH, ETH or other approved crypto and soon international payment processing. Select the option you want. We will select **Pay With Bank Account**.

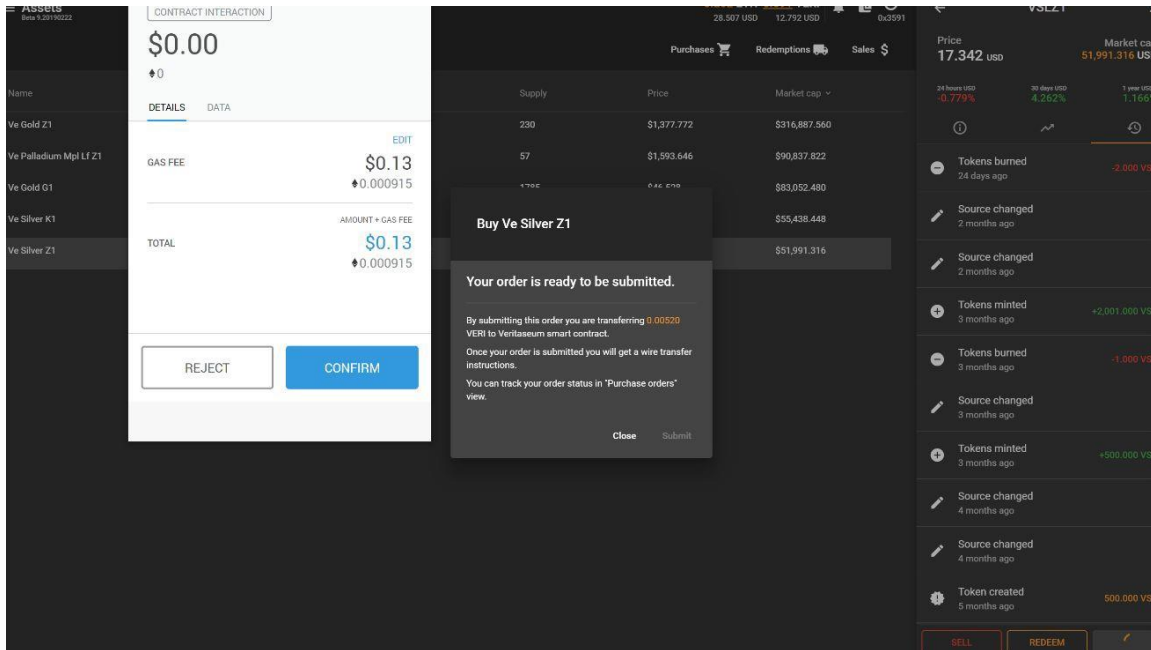

We then enter the quantity we desire and whether we want to receive a discount by using a small percentage of VERI. Under the quantity, you will see the amount you will pay in fiat for your chosen quantity. If you use VERI, the amount will be updated to reflect the discount.

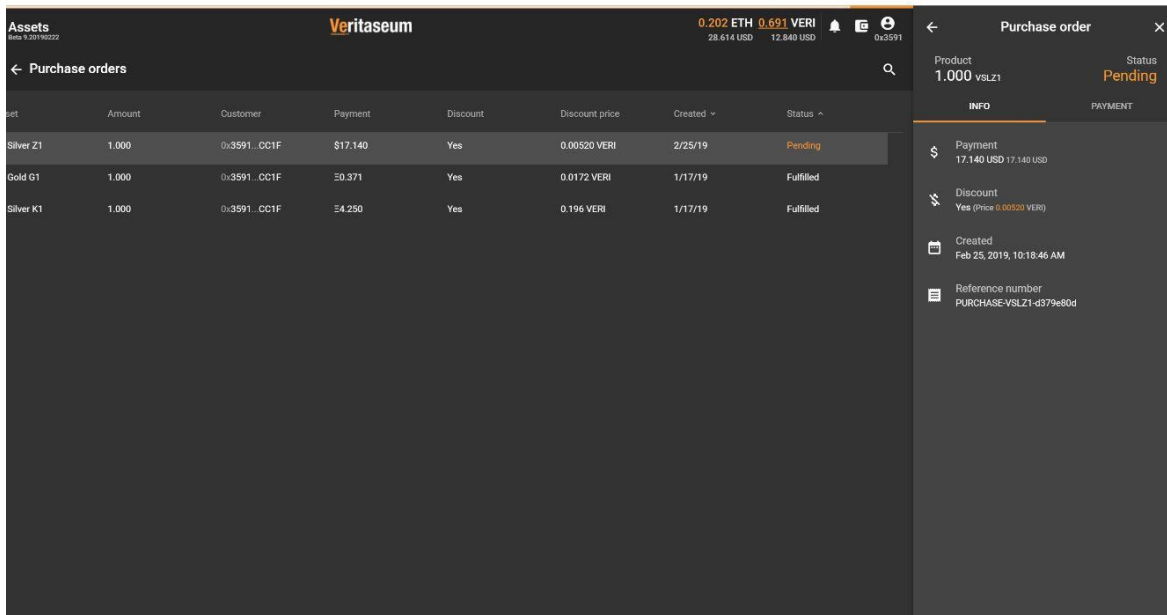

After agreeing to the Terms of Use, which you should closely review, click continue. The next screen confirms your transaction and the amount of VERI you will be using along with the message regarding instructions for wiring your funds. Click on submit. Your wallet will ask you to confirm the gas fee for placing you VERI into the smart contract for your purchase.

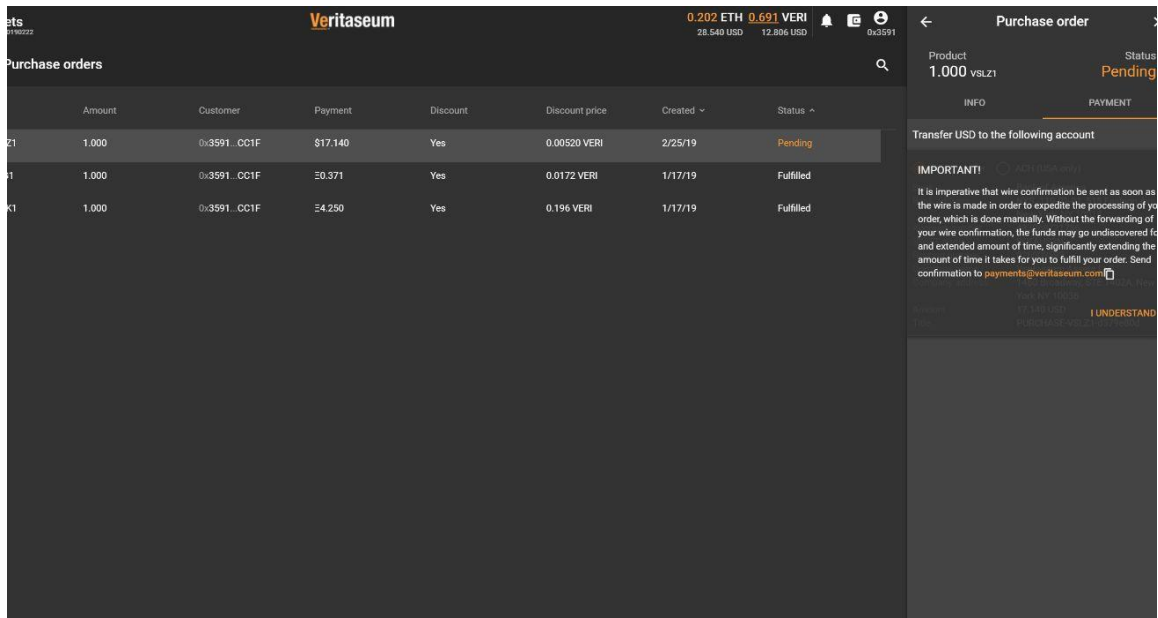

After confirming your gas fee, the right dialog box will show the amount you are purchasing and the transaction as **Pending**. Under the **Info** tab you will see the details related to your purchase including a reference number so we can track the transaction, if needed.

Under the Payment tab, read the important message regarding the timeline to submit your wire and click **I Understand** to see the wire information. Follow the instructions and send your wire right out to ensure no delays in receiving your tokens.

2. Selling VeAssets

Once you buy a VeAsset, that token is yours to give, sell or use, as you would any asset that you own. You can send full or partial amounts to others. However, when you Sell a VeAsset on the VeADIR, you are selling the token back to Veritaseum. Tokens can only be sold back in whole units (no partial or fractional amounts) as we only hold whole units. When a token is sold back, it is burned and the asset placed back into available inventory. There are two important items to note. First, if you Sell but did not buy the token and are not a registered/KYC user, you MUST KYC in order to Sell. Second, it is important to note that Sell is at Veritaseum's option. Therefore we are not obligated to buy tokens back. However, in almost all cases, the tokens will be bought back. To Sell a large volume (over \$25,000), contact the company, directly.

To sell your tokens back to Veritaseum, select the asset and then the **Sell** button. You will see a dialog box that will require you enter the amount of the asset you want sell (again, in whole units) and whether you want to receive fiat or ETH as payment. On the left of the box you will see the amount you would receive in your payment choice. If you do not have enough of the token in your wallet, you will receive an insufficient funds notice and will not be allowed to continue. We selected ETH for this example. For ETH, your offer will be processed right away as the transaction receives the token from your wallet and ETH is sent to you in return. If we had selected a fiat currency, you would be prompted to enter your bank ACH (U.S. only) or bank wire instructions.
