

You can see each of your sell transactions in the **Sales \$** list, which shows the asset purchased, amount paid, your wallet where it was sent and its current status – fulfilled, pending, etc.

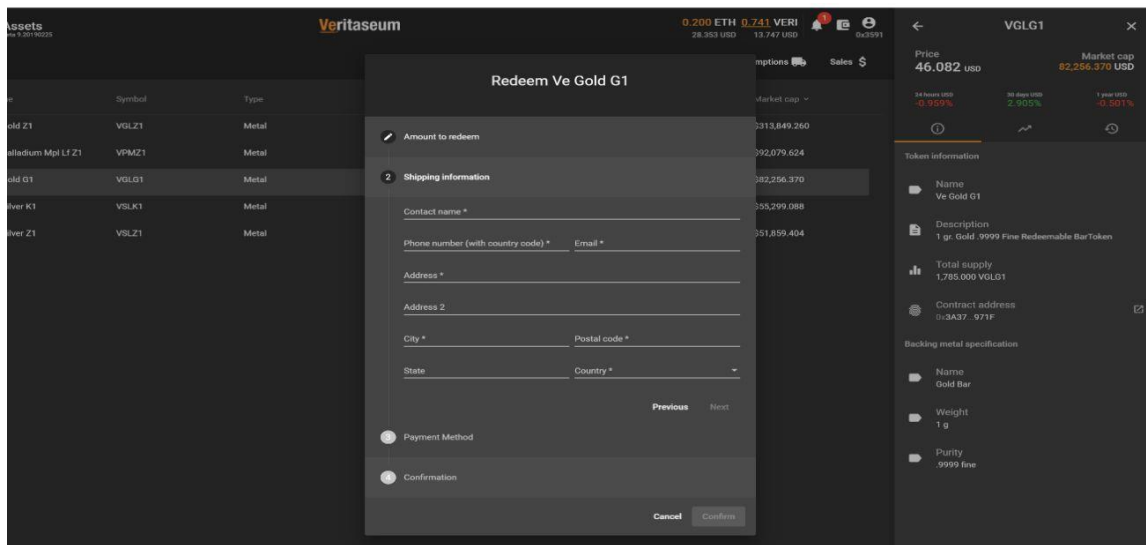

3. Redeeming VeAssets

VeAssets are 100% redeemable for the asset your token represents. As with **Sell**, you must be a registered/KYC user in the VeADIR. Therefore, even if you received your token from someone else, you **MUST** be KYC'd to redeem. To redeem, select your asset and click the **Redeem** button to open a four-part dialog box as we need to know where to send it as well as estimate your shipping

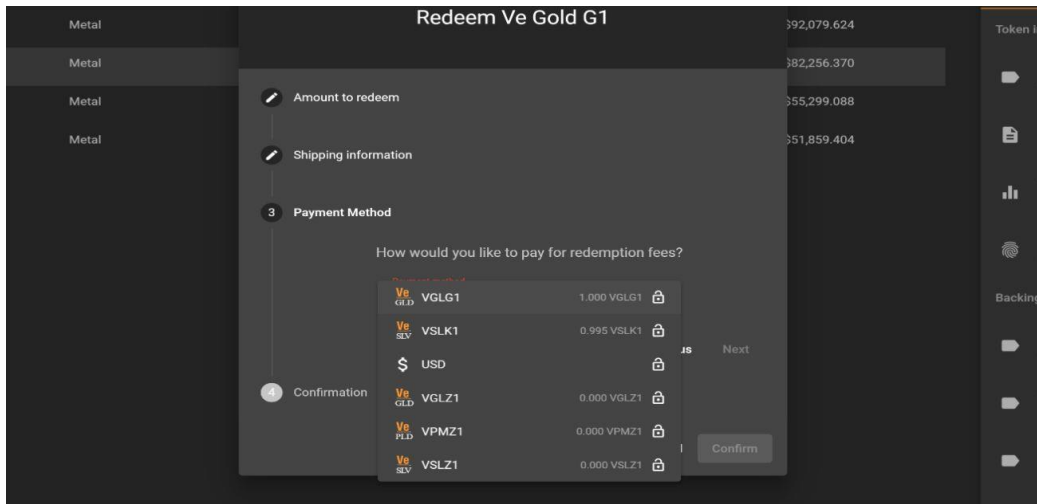

and other fees. First enter the number of tokens you wish to redeem. As with Sell, you can only redeem in whole units as we don't hold partial units.

Then click on **Next** to enter your shipping information. This needs to match your KYC records on file with us so as to help prevent fraudulent transactions.

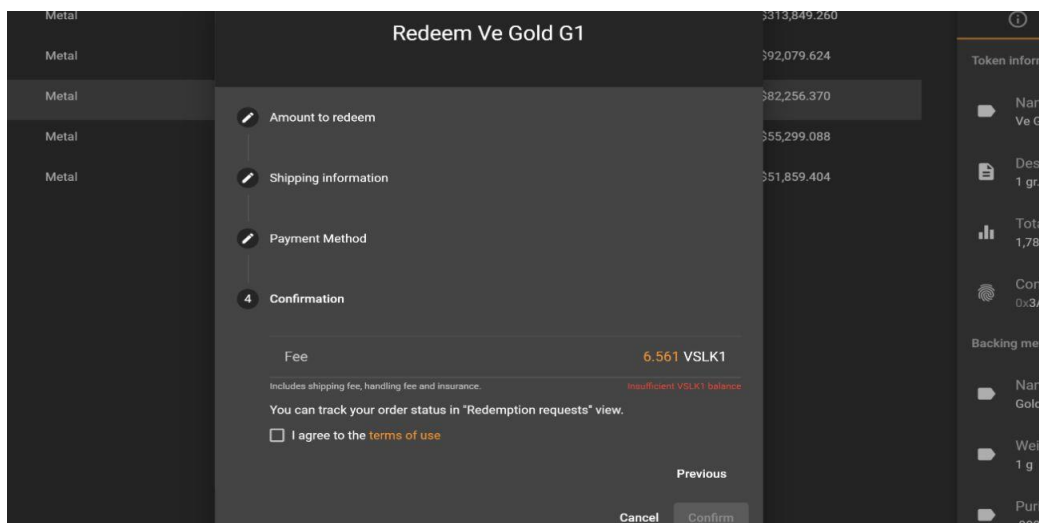

After entering your shipping information, select next to enter your payment method. The pull down menu provides all the options available in your wallet including ETH, fiat, and other VeAssets tokens.

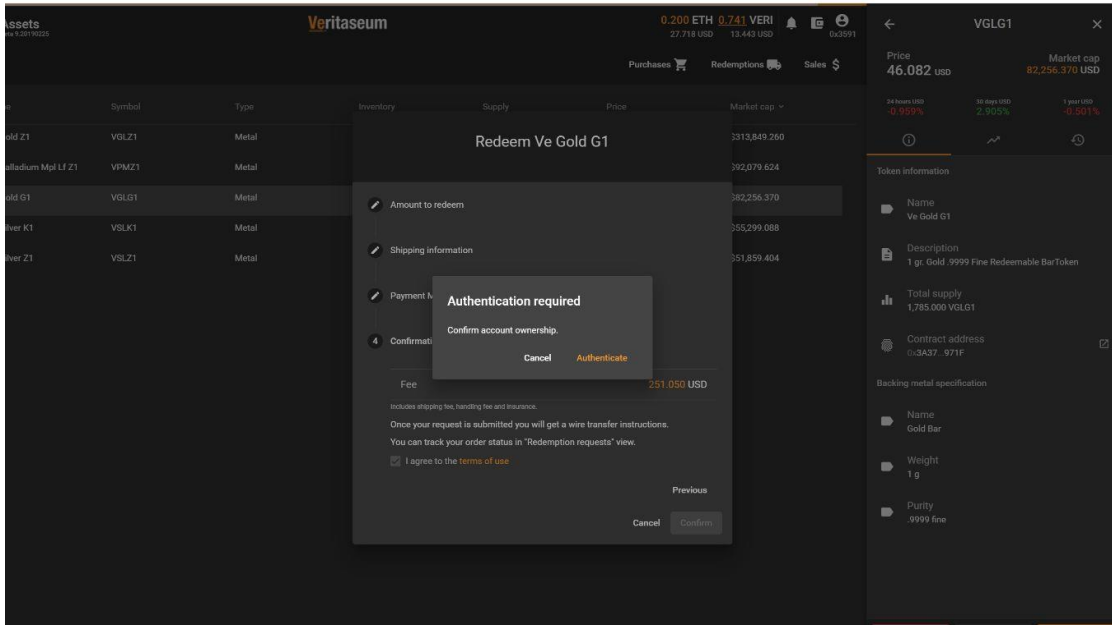

If you are using fiat, you should first deposit it into your wallet using the USD contract by following the instructions provided. The USD you deposit can only be used within the VeADIR for transactions and USD is received by ACH or wire.

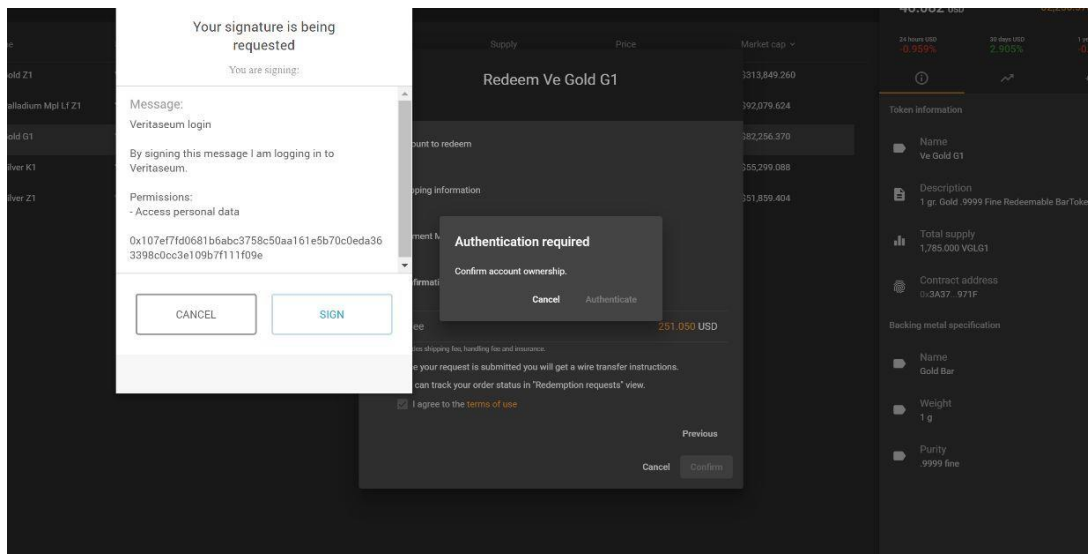

The VeADIR will then calculate an estimate of the amount required to cover your redemption fees which includes the costs of shipping and handling. If you have an insufficient amount in your chosen payment method, you will receive an insufficient funds notice and will not be allowed to continue. You can click on [Previous](#) to go back and change your payment method.

Otherwise, if everything is correct, click **Confirm** and your wallet will ask you to confirm the gas fees. You will then be prompted to authenticate your account by clicking on **Authenticate**.

Your wallet will ask you to sign, which does not cost any gas.

Once you sign, the VeADIR will submit your redeem request and you will see the Submitting status in the dialog box to the right as well as in your redemption list. As your personal details must be checked against our KYC'd users, you can check back in 24 hours to make sure your

request was received and to obtain wire instructions for USD purchases. If you use other VeAssets, the transaction will start after authentication is complete including the shipment of your assets. Once shipped, your asset will show fulfilled in the redemption list. Your redemption list will show the asset, amount, the contract address to which it will be shipped, the redemption fees and its status.
